An Investment Analysis Case Study

This case is a group project that is due on March 31, before class at 10.30.

Stating the obvious: Each group will turn in one report (sounds obvious, but might as well make it explicit) electronically (as a pdf file). While you should include your cash flows tables in your report, you don’t have to attach your excel spreadsheets.

Cover page: Each report should have a cover page that contains the following – the names of the group members in alphabetical order and the following summary information on the analysis:
Decision on Investment: Invest or Do not invest
Cost of capital: % value
Return on capital: % value
NPV – 10-year life: $ value
NPV- Longer life: $ value

Report format: Please try to keep your report brief. In the report, be clear about:
  a. Any assumptions you made to get to your conclusion
  b. Your final recommendation

Exhibits: Please make sure that you include the following in your exhibits
  a. The table of earnings/cash flows by year
  b. Your computation of cost of equity/capital/discount rate

Time: To keep time straight, you can assume the following:
  • Next year: Year 1
  • Most recent year: Just ended
  • Right now: Time 0. Any “up front” expenditure is incurred immediately.
Google Disrupts the Auto Market: The Google Car?

The Setting

Google Inc. has had a very good run, both in terms of earnings and stock prices, over the last decade. Based largely on the success of its advertising business, the company has reported double digit growth in revenues and earnings over the last few years (see exhibit 1) and its stock price has reflected this success (see exhibit 2). It has a substantial cash balance and a strong balance sheet (see exhibit 3). However, Sundar Pichai, CEO of Google, is concerned that the halcyon days of online advertising growth are coming to an end and is under pressure from financial markets to come up a new revenue stream.

The Proposal

Google is considering entering the automobile market with an innovatively designed electric car, called the GCar, aimed at the premium end of the automobile market, and with significant automated driving features. You have been asked to collect the data to make the assessment and have come back with the following information:

1. **R&D Expenses:** Google has already spent (and expensed) $ 5 billion on research on the automotive technology and development of the commercial design, mostly through its Waymo division. None of that money can be recouped at this stage, if Google decides not to go ahead with the GCar.

2. **Introductory Costs:** If Google decides to go ahead with the GCar investment, it will have to spend $22 billion up front (right now) to lock in suppliers, distributors and retailers, and to invest in infrastructure. The cost is depreciable over the next 10 years, down to a salvage value of $ 2 billion, and Google expects to use straight-line depreciation.

3. **Market Potential and Share:** In the premium auto market (including all cars priced at or above $60,000) there were 5 million automobiles sold globally in the most recent year and the market is expected to grow approximately 4% a year for the next decade. Google expects to gain a 2% market share next year if the GCar is introduced and increase that market share by 2% a year (4% in the second year, 6% in the third year, 8% in the fourth year and 10% in year 5) to reach a target market share of 10% of the
overall market by the fifth year. It expects to maintain that market share beyond year 6.

4. **Pricing and Unit Costs**: Google expects to price its cars at $75,000 a unit next year and the price will keep pace with inflation after that. Based upon the costs of the materials used in the GCar currently, Google expects the production cost per unit to be $50,000 next year and grow at the inflation rate thereafter.

5. **Marketing Options and Costs**: Google plans to use two different retailing options. In the first, it will sell the GCar through auto dealership and pay the dealerships a commission of 10% of the price per unit sold (The retailers will have to follow Google’s fixed price schedule – no discounting allowed). In the second, it will sell the GCar through the Google Auto Stores around the country. To do the latter, Google will have to spend $5 billion right now in creating the stores; this expense will be depreciated straight line over the next 10 years to a salvage value of zero. It will also pay its salespeople a commission of 5% of the price per unit for every car sold at an Google Auto store. Google expects to generate 80% of its revenues from auto dealerships and 20% from Google Auto Store sales each year for the next 10 years.

6. **Geographical breakdown**: Google expects to get its revenues from the GCar globally, with the following breakdown for revenues:

<table>
<thead>
<tr>
<th>Region</th>
<th>% of Revenues</th>
</tr>
</thead>
<tbody>
<tr>
<td>Africa</td>
<td>2.00%</td>
</tr>
<tr>
<td>Asia</td>
<td>30.00%</td>
</tr>
<tr>
<td>Australia &amp; New Zealand</td>
<td>8.00%</td>
</tr>
<tr>
<td>Central and South America</td>
<td>10.00%</td>
</tr>
<tr>
<td>Eastern Europe &amp; Russia</td>
<td>5.00%</td>
</tr>
<tr>
<td>Middle East</td>
<td>5.00%</td>
</tr>
<tr>
<td>North America</td>
<td>25.00%</td>
</tr>
<tr>
<td>Western Europe</td>
<td>15.00%</td>
</tr>
</tbody>
</table>

Google expects this revenue breakdown for the GCar to be stable over time. The regional country risk premiums (over and above the mature market premium) are provided in exhibit 4. You can assume that the premium for mature markets (Aaa rated countries) is 5.00%.

7. **Distribution Facilities and Costs**: Google currently uses a distribution facility that it owns and operates in the United States for its products. Google used only 40% of the facility in the most recent year, but the demand for this space from its current
products (not including the GCar) is expected to grow 12% a year for the next 10 years. If Google goes ahead with the GCar, it will use the excess capacity to store GCar supplies, with every 10,000 GCars using 1% of the capacity. (Thus, in a given year, if 200,000 GCars are produced, it will take up 20% of the total capacity of the battery factory). If the capacity limit is reached, Google will have to invest a substantial amount to create a new facility of equivalent capacity. The current estimate of the cost of building a new distribution facility is $5 billion, but this cost will grow at the inflation rate.

8. G&A expenses: Google will allocate 10% of its existing general and administrative costs to the new division. These costs total $10 billion for the entire firm in the most recent year and are expected to grow 5% a year for the next 10 years, with or without the GCar investment. In addition, it is expected that Google will have an increase of $0.5 billion in general and administrative costs next year when the GCar is introduced, and this amount will grow with the new division’s dollar revenues after that. The latter cost is directly related to the new GCar division.

9. Advertising Expenses: Google spent $8 billion on advertising in the most recent year. If Google does not invest in the GCar, it expects this cost to increase 5% a year for the next 10 years. If the GCar is introduced, the total advertising expenses each year, from years 1 to 10, are expected to be 15% higher than they would have been without the GCar division.

10. Working Capital: The GCar will create working capital needs, which you have estimated as follows:
   - The sale of GCars to retailers will create accounts receivable amounting to 5% of revenues each year.
   - Inventory (of both the input material and finished GCars) will be approximately 10% of the variable production cost (not including depreciation, marketing costs, allocations or advertising expenses).
   - Accounts payable will be 6% of the variable production cost (not including depreciation, marketing costs, allocations or advertising expenses).
All of these working capital investments will have to be made at the beginning of each year in which goods are sold. Thus, the working capital investment for the first year will have to be made at the beginning of the first year.

11. **Side benefits for device sales:** If Google goes ahead with the GCar, it will see revenues for its products (software and devices) increase by $0.5 billion next year (as they are integrated into the GCar), and grow at the inflation rate after that. The after-tax operating margin (after tax operating income/ revenues) is 40% for all Google software and devices.

12. **Risk Measures:** The beta for Google is 0.87, calculated using weekly returns over the last 2 years and against the S&P 500 Index and 0.85 against the MSCI Global Index (see exhibit 5). Google currently gets about 90% of its revenues from advertising, 8% from its cloud businesses and 2% from software/devices. The details of the beta calculation are included in Exhibit 5, as well as bottom-up beta estimates for each of Google’s existing businesses. The current stock price for the firm is $2,000/share and there are 650 million shares outstanding.

13. **Debt Choices:** Google expects to finance the GCar division using the same mix of debt and equity (in market value terms) as it is using currently in the rest of its business. Google currently has $5 billion in book (and market) value of interest bearing debt (with a weighted average maturity of 5 years), and it reports the following lease commitments for next five years:

<table>
<thead>
<tr>
<th>Year</th>
<th>Lease commitment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$ 2,198 million</td>
</tr>
<tr>
<td>2</td>
<td>$ 2,170 million</td>
</tr>
<tr>
<td>3</td>
<td>$ 1,995 million</td>
</tr>
<tr>
<td>4</td>
<td>$ 1,738 million</td>
</tr>
<tr>
<td>5</td>
<td>$ 1,389 million</td>
</tr>
<tr>
<td>Beyond</td>
<td>$ 5,601 million</td>
</tr>
</tbody>
</table>

The lease payment for the most recent year is $2,004 million. Google was rated Aa2 by Moody’s and the default spread for companies with that rating is 0.60%.

14. **Taxes:** Google’s effective tax rate is 16.2%, but its marginal tax rate is 25%.
15. **Macro data**: The current long-term US Treasury bond rate is 1.5%, and the expected inflation rate is 1.0%.

16. **Other information**: You have collected information on other automobile companies in Exhibit 6. The data includes the regression betas of these companies and relevant information on both market values of debt, equity and cash. You can assume a 25% marginal tax rate for these firms, as well. (You can also assume that the debt includes the present value of operating leases).
Questions on the Project

1. Accounting Return Analysis
   - Estimate the operating income from the proposed GCAR investment to Google over the next 10 years.
   - Estimate the after-tax return on capital for the investment over the 10-year period.
   - Based upon the after-tax return on capital, would you accept or reject this project?

   This will require you to make some assumptions about allocation and expensing. Make your assumptions as consistent as you can and estimate the return on capital.

2. Cash Flow Analysis
   - Estimate the after-tax incremental cash flows from the proposed GCAR investment to Google over the next 10 years.
   - If the project is terminated at the end of the 10th year, and both working capital and investment in other assets can be sold for book value at the end of that year, estimate the net present value of this project to Google. Develop a net present value profile and estimate the internal rate of return for this project.
   - If the GCAR division is expected to have a life much longer than 10 years, estimate the net present value of this project, making reasonable assumptions about investments needed and cash flows. Develop a net present value profile and estimate the internal rate of return for this project.

3. Sensitivity Analysis
   - Estimate the sensitivity of your numbers to changes in two of the key assumptions underlying the analysis (You get to pick what you think are the two key assumptions).

   Based upon your analysis, and any other considerations you might have, tell me whether you would accept this project or reject it. Explain, briefly, your decision.
