BIAS AND PRECONCEPITIONS: THE BIGGEST BARRIER TO VALUATION

SPRING 2019
Bias: The Effects

- **Preconceptions and priors**: When you start on the valuation of a company, you almost never start with a blank slate. Instead, your valuation is shaped by your prior views of the company in question.
  - Corollary 1: The more you know about a company, the more likely it is that you will be biased, when valuing the company.
  - Corollary 2: The “closer” you get to the management/owners of a company, the more biased your valuation of the company will become.

- **Value first, valuation to follow**: In principle, you should do your valuation first before you decide how much to pay for an asset. In practice, people often decide what to pay and do the valuation afterwards.
Bias: The Sources

- **The power of the subconscious:** We are human, after all, and as a consequence are susceptible to
  - Herd behavior: For instance, there is the “market price” magnet in valuation, where estimates of intrinsic value move towards the market price with each iteration.
  - Hindsight bias: If you know the outcome of a sequence of events, it will affect your valuation. (That is why teaching valuation with cases is an exercise in futility)

- **The power of suggestion:** Hearing what others think a company is worth will color your thinking, and if you view those others as more informed/smarter than you are, you will be influenced even more.

- **The power of money:** If you have an economic stake in the outcome of a valuation, bias will almost always follow.
  - Corollary 1: Your bias in a valuation will be directly proportional to who pays you to do the valuation and how much you get paid.
  - Corollary 2: You will be more biased when valuing a company where you already have a position (long or short) in the company.
Bias in Intrinsic Valuation (DCF)

Intrinsic Value: The Biasers

Value of Growth

- Push up growth rate in revenues and increase operating margins
- While reducing reinvestment (capital expenditures and working capital)

Discount Rate for Cash Flows

- Replace risk free rate with lower normalized rate
- Assume a lower relative risk leven or beta
- Use lower or no equity risk premium
- Use a higher target debt ratio, without adjusting other inputs

Terminal Value of firm (equity)

\[ V = \frac{\text{Expected Cash flow}_{n+1}}{(\text{Cost of capital} - g)} \]

Cash flows from existing investments

- Treat operating expenses as one-time or extraordinary & ignore.
- Treat one-time income as continuing income.

Use a stable growth rate> growth rate of economy

Grow with no reinvestment

Assume very high excess returns in perpetuity
Bias in Pricing

- In pricing, you price a company or asset, based upon how similar companies are priced, but you get to pick
  - Which companies (assets) are similar.
  - What variable you scale the pricing to (to earnings, book value or revenues).
- The potential for abuse is immense, since you will pick a peer group and a pricing metric that gives you the answer you were looking for...
Valuing your own business

You are valuing your own business for sale to a third person.
- High
- Low
- Unclear

You are a venture capitalist valuing this business for an investment.
- High
- Low
- Unclear
It’s personal

You are valuing your own business for divorce court; half of your estimated value will go to your spouse (soon to be ex-spouse)

- High
- Low
- Unclear

You are an appraiser for the owner, valuing a business for tax purposes.

- High
- Low

The Bottom Line

- **It is unavoidable**: If you are human, you have bias. You cannot make it go away and even if you build a machine model, your biases will be in that model.

- **No more denial**: Let’s stop dancing around it and denying that it exists. The valuation accreditation groups and valuation professionals have to stop the delusions about being objective.

- **Let’s practice Bayesian valuation**: Be transparent about your biases and your priors.

- **Be honest with yourself**: Be honest with yourself about your biases, and from personal experience, that’s not easy to do.
