CORPORATE FINANCE
WHAT IS IT?

Aswath Damodaran
What is corporate finance?

- Every decision that a business makes has financial implications, and any decision which affects the finances of a business is a corporate finance decision.
- Defined broadly, everything that a business does fits under the rubric of corporate finance.
Objectives

- To give you the capacity to understand the theory and apply, in real world situations, the techniques that have been developed in corporate finance.
  - Motto for class: If it cannot be applied, who cares?

- To give you the big picture of corporate finance so that you can understand how things fit together.
  - Motto for class: You can forget the details, but don’t miss the storyline.

- To show you that corporate finance is fun.
  - Motto for class: Are we having fun yet?

First Principles & The Big Picture

Maximize the value of the business (firm)

The Investment Decision
Invest in assets that earn a return greater than the minimum acceptable hurdle rate

The Financing Decision
Find the right kind of debt for your firm and the right mix of debt and equity to fund your operations

The Dividend Decision
If you cannot find investments that make your minimum acceptable rate, return the cash to owners of your business

The hurdle rate should reflect the riskiness of the investment and the mix of debt and equity used to fund it.

The return should reflect the magnitude and the timing of the cashflows as well as all side effects.

The optimal mix of debt and equity maximizes firm value.

The right kind of debt matches the tenor of your assets.

How much cash you can return depends upon current & potential investment opportunities.

How you choose to return cash to the owners will depend whether they prefer dividends or buybacks.

Aswath Damodaran
Theme 1: Corporate finance is “common sense”

- There is nothing earth shattering about any of the first principles that govern corporate finance. After all, arguing that taking investments that make 9% with funds that cost 10% to raise seems to be stating the obvious (the investment decision), as is noting that it is better to find a funding mix which costs 10% instead of 11% (the financing decision) or positing that if most of your investment opportunities generate returns less than your cost of funding, it is best to return the cash to the owners of the business and shrink the business.

- Shrewd business people, notwithstanding their lack of exposure to corporate finance theory, have always recognized these fundamentals and put them into practice.
It is the focus on maximizing the value of the business that gives corporate finance its focus. As a result of this singular objective, we can:

- Choose the “right” investment decision rule to use, given a menu of such rules.
- Determine the “right” mix of debt and equity for a specific business.
- Examine the “right” amount of cash that should be returned to the owners of a business and the “right” amount to hold back as a cash balance.

This certitude does come at a cost. To the extent that you accept the objective of maximizing firm value, everything in corporate finance makes complete sense. If you do not, nothing will.
Theme 3: The focus in corporate finance changes across the life cycle...

*Con Ed’s Financial Balance Sheet*

<table>
<thead>
<tr>
<th>Assets</th>
<th>Liabilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Investments already made: $15 billion</td>
<td>Debt $7 billion</td>
</tr>
<tr>
<td>Investments yet to be made: $3 billion</td>
<td>Equity $11 billion</td>

</table>

*Linkedin’s Financial Balance Sheet*

<table>
<thead>
<tr>
<th>Assets</th>
<th>Liabilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Investments already made: $0.25 billion</td>
<td>Debt $0.00 billion</td>
</tr>
<tr>
<td>Investments yet to be made: $13.35 billion</td>
<td>Equity $13.6 billion</td>
</tr>
</tbody>
</table>
Every business, small or large, public or private, US or emerging market, has to make investment, financing and dividend decisions.

The objective in corporate finance for all of these businesses remains the same: maximizing value.

While the constraints and challenges that firms face can vary dramatically across firms, the first principles do not change.

A publicly traded firm, with its greater access to capital markets and more diversified investor base, may have much lower costs of debt and equity than a private business, but they both should look for the financing mix that minimizes their costs of capital.

A firm in an emerging markets may face greater uncertainty, when assessing new investments, than a firm in a developed market, but both firms should invest only if they believe they can generate higher returns on their investments than they face as their respective (and very different) hurdle rates.
Theme 5: If you violate first principles, you will pay a price (no matter who you are..)

- There are some investors/analysts/managers who convince themselves that the first principles don’t apply to them because of their superior education, standing or past successes, and then proceed to put into place strategies or schemes that violate first principles.

- Sooner or later, these strategies will blow up and create huge costs.

- Almost every corporate disaster or bubble has its origins in a violation of first principles.
Maximize the value of the business (firm): *Chapter 2 & 12*

**The Investment Decision**
Invest in assets that earn a return greater than the minimum acceptable hurdle rate.

The **hurdle rate** should reflect the riskiness of the investment and the mix of debt and equity used to fund it. *Chapters 3,4*

Sessions 5-12

**The Financing Decision**
Find the right kind of debt for your firm and the right mix of debt and equity to fund your operations.

The **return** should reflect the magnitude and the timing of the cashflows as well as all side effects. *Chapters 5,6*

Sessions 13-15

**The Dividend Decision**
If you cannot find investments that make your minimum acceptable rate, return the cash to owners of your business.

The **right kind** of debt matches the tenor of your assets. *Chapters 7,8*

Session 20

**How much cash** you can return depends upon current & potential investment opportunities. *Chapter 9*

Session 21

**How you choose** to return cash to the owners will depend whether they prefer dividends or buybacks. *Chapter 11*

Sessions 22-23
And it will be applied...
