**EDITORIAL** 

#### World's Best Medical Care?

Many Americans are under the delusion that we have "the best health care system in the world," as President Bush sees it, or provide the "best medical care in the world," as Rudolph Giuliani declared last week. That may be true at many top medical centers. But the disturbing truth is that this country lags well behind other advanced nations in delivering timely and effective care.

Michael Moore struck a nerve in his new documentary, "Sicko," when he extolled the virtues of the government-run health care systems in France, England, Canada and even Cuba while deploring the failures of the largely private insurance system in this country. There is no question that Mr. Moore overstated his case by making foreign systems look almost flawless. But there is a growing body of evidence that, by an array of pertinent yardsticks, the United States is a laggard not a leader in providing good medical care.

Seven years ago, the World Health Organization made the first major effort to rank the health systems of 191 nations. France and Italy took the top two spots; the United States was a dismal 37th. More recently, the highly regarded Commonwealth Fund has pioneered in comparing the United States with other advanced nations through surveys of patients and doctors and analysis of other data. Its latest report, issued in May, ranked the United States last or next-to-last compared with five other nations — Australia, Canada, Germany, New Zealand and the United Kingdom — on most measures of performance, including quality of care and access to it. Other comparative studies also put the United States in a relatively bad light.

**Insurance coverage.** All other major industrialized nations provide universal health coverage, and most of them have comprehensive benefit packages with no cost-sharing by the patients. The United States, to its shame, has some 45 million people without health insurance and many more millions who have poor coverage. Although the president has blithely said that these people can always get treatment in an emergency room, many studies have shown that people without insurance postpone treatment until a minor illness becomes worse, harming their own health and imposing greater costs.

Access. Citizens abroad often face long waits before they can get to see a specialist or undergo elective surgery. Americans typically get prompter attention, although Germany does better. The real barriers here are the costs facing low-income people without insurance or with skimpy coverage. But even Americans with above-average incomes find it more difficult than their counterparts abroad to get care on nights or weekends without going to an emergency room, and many report having to wait six days or more for an appointment with their own doctors.

**Fairness.** The United States ranks dead last on almost all measures of equity because we have the greatest disparity in the quality of care given to richer and poorer citizens. Americans with below-average incomes are much less likely than their counterparts in other industrialized nations to see a doctor when sick, to fill prescriptions or to get needed tests and follow-up care.

**Healthy lives.** We have known for years that America has a high infant mortality rate, so it is no surprise that we rank last among 23 nations by that yardstick. But the problem is much broader. We rank near the bottom in healthy life expectancy at age 60, and 15th among 19 countries in deaths from a wide range of illnesses that would not have been fatal if treated with timely and effective care. The good news is that we have done a better job than other industrialized nations in reducing smoking. The bad news is that our obesity epidemic is the worst in the world.

Quality. In a comparison with five other countries, the Commonwealth Fund ranked the United States first in providing the "right care" for a given condition as defined by standard clinical guidelines and gave it especially high marks for preventive care, like Pap smears and mammograms to detect early-stage cancers, and blood tests and cholesterol checks for hypertensive patients. But we scored poorly in coordinating the care of chronically ill patients, in protecting the safety of patients, and in meeting their needs and preferences, which drove our overall quality rating down to last place. American doctors and hospitals kill patients through surgical and medical mistakes more often than their counterparts in other industrialized nations.

**Life and death.** In a comparison of five countries, the United States had the best survival rate for breast cancer, second best for cervical cancer and childhood leukemia, worst for kidney transplants, and almost-worst for liver transplants and colorectal cancer. In an eight-country comparison, the United States ranked last in years of potential life lost to circulatory diseases, respiratory diseases and diabetes and had the second highest death rate from bronchitis, asthma and emphysema. Although several factors can affect these results, it seems likely that the quality of care delivered was a significant contributor.

**Patient satisfaction.** Despite the declarations of their political leaders, many Americans hold surprisingly negative views of their health care system. Polls in Europe and North America seven to nine years ago found that only 40 percent of Americans were satisfied with the nation's health care system, placing us 14th out of 17 countries. In recent Commonwealth Fund surveys of five countries, American attitudes stand out as the most negative, with a third of the adults surveyed calling for rebuilding the entire system, compared with only 13 percent who feel that way in Britain and 14 percent in Canada.

That may be because Americans face higher out-of-pocket costs than citizens elsewhere, are less apt to have a long-term doctor, less able to see a doctor on the same day when sick, and less apt to get their questions answered or receive clear instructions from a doctor. On the other hand, Gallup polls in recent years have shown that three-quarters of the respondents in the United States, in Canada and in Britain rate their personal care as excellent or good, so it could be hard to motivate these people for the wholesale change sought by the disaffected.

Use of information technology. Shockingly, despite our vaunted prowess in computers, software and the Internet, much of our health care system is still operating in the dark ages of paper records and handwritten scrawls. American primary care doctors lag years behind doctors in other advanced nations in adopting electronic medical records or prescribing medications electronically. This makes it harder to coordinate care, spot errors and adhere to standard clinical guidelines.

**Top-of-the-line care.** Despite our poor showing in many international comparisons, it is doubtful that many Americans, faced with a life-threatening illness, would rather be treated elsewhere. We tend to think that our very best medical centers are the best in the world. But whether this is a realistic assessment or merely a cultural preference for the home team is difficult to say. Only when better measures of clinical excellence are developed will discerning medical shoppers know for sure who is the best of the best.

With health care emerging as a major issue in the presidential campaign and in Congress, it will be important to get beyond empty boasts that this country has "the best health care system in the world" and turn instead to fixing its very real defects. The main goal should be to reduce the huge number of uninsured, who are a major reason for our poor standing globally. But there is also plenty of room to improve our coordination of care, our use of computerized records, communications between doctors and patients, and dozens of other factors that impair the quality of care. The world's most powerful economy should be able to provide a health care system that really is the best.

## MEASURING OVERALL HEALTH SYSTEM PERFORMANCE FOR 191 COUNTRIES

Ajay Tandon Christopher JL Murray Jeremy A. Lauer David B. Evans

**GPE Discussion Paper Series: No 30** 

EIP/GPE/EQC World Health Organization

# THE COMPARATIVE EFFICIENCY OF NATIONAL HEALTH SYSTEMS IN PRODUCING HEALTH

#### AN ANALYSIS OF 191 COUNTRIES

David B. Evans
Ajay Tandon
Christopher JL Murray
Jeremy A. Lauer

**GPE Discussion Paper Series: No 29** 

EIP/GPE/EQC World Health Organization

http://www.who.int/entity/healthinfo/paper29.pdf

This study is based on the measure of disability adjusted life expectancy, DALE.

Appendix: Efficiency or Performance Index and Uncertainty Intervals, 191 countries, 1993-97

	Uncertainty			Performance	Uncertainty

## **Europeans Perform Highest In Ranking of World Health**

By PHILIP J. HILTS Published: June 21, 2000

The World Health Organization issued figures yesterday that rank health care systems around the world for the first time. They indicate that European health systems are generally performing best and that the United States is lagging behind, largely because of inequal distribution of health care services.

The rankings are contained in the World Health Report 2000. The report measured not just overall spending on health but also how health care was distributed among different groups in each of the 191 nations that are members of the World Health Organization. The countries were judged according to five health-care categories that W.H.O surveys found to be most important to the people in various nations.

Until now, argument over how well health systems and policies are working has been based on anecdotes and fractional bits of data, said Dr. Jeffrey Koplan, director of the United States Centers for Disease Control and Prevention. He said the report was the first attempt to put the arguments on a factual footing. According to the report, the five top nations for health care were France, Italy, San Marino, Andorra and Malta. One surprise in the findings, said Dr. David Evans of the W.H.O.'s Global Program on Evidence for Health Policy, was the good rankings for southern European countries such as Italy and Spain. "People in those countries don't believe their health systems are doing very well," he said. Oman ranked No. 8, a surprise because its health care system was in a shambles in the 1970's, with very high infant mortality, and because it has a relatively small budget for health. Its spending per capita on health is one-ninth of that of the United States, for example.

Dr. Christopher J. L. Murray, an international health economist from the Harvard School of Public Health, who is one of two leaders of the project, said Oman demonstrates that great changes in a country's health can be produced in a short period of time. Another surprise was China's ranking of No. 144. A little more than a decade ago, China had a public health care system, but it has collapsed, and now people there pay for virtually all their care out of pocket. It was ranked No. 188 in fairness of financing.

The United States outspends the world and ranks near the top in average health measures, but fails to deliver good health care to a large proportion of its population and distributes the cost relatively unfairly, according to the report's measures, leaving it at number 37 in the rankings.

Using the measure "health life expectancy" -- that is, life expectancy minus years of sickness and disability, there are counties in the United States where Native American children at birth can look forward to only about 50 years of health life on average, while some Asian minorities in suburban New York can expect more than 90 years of healthy life, Dr. Murray said. The report demonstrates, Dr. Murray said, "that no one model is best, but the numbers will give us the means over time to test which innovation in health systems work best and which are failing."

The new rating system bases national scores on five measures, and in producing a ranking takes into account the financial resources it has available. The five measures used are: overall level of health or life expectancy; health fairness or life expectancy as measured across various populations within a country; responsiveness or how well people rated performance of their health care system; fairness in responsiveness among different groups in the same country; and fairness in financing among different groups, which looked at what proportion of income is devoted to health care.

# **US Slipping in Life Expectancy Rankings**

By STEPHEN OHLEMACHER Associated Press Writer

WASHINGTON (AP) -- Americans are living longer than ever, but not as long as people in 41 other countries.

For decades, the United States has been slipping in international rankings of life expectancy, as other countries improve health care, nutrition and lifestyles. Countries that surpass the U.S. include Japan and most of Europe, as well as Jordan, Guam and the Cayman Islands.

"Something's wrong here when one of the richest countries in the world, the one that spends the most on health care, is not able to keep up with other countries," said Dr. Christopher Murray, head of the Institute for Health Metrics and Evaluation at the University of Washington. A baby born in the United States in 2004 will live an average of 77.9 years. That life expectancy ranks 42nd, down from 11th two decades earlier, according to international numbers provided by the Census Bureau and domestic numbers from the National Center for Health Statistics. Andorra, a tiny country in the Pyrenees mountains between France and Spain, had the longest life expectancy, at 83.5 years, according to the Census Bureau. It was followed by Japan, Macau, San Marino and Singapore.

The shortest life expectancies were clustered in Sub-Saharan Africa, a region that has been hit hard by an epidemic of HIV and AIDS, as well as famine and civil strife. Swaziland has the shortest, at 34.1 years, followed by Zambia, Angola, Liberia and Zimbabwe. Researchers said several factors have contributed to the United States falling behind other industrialized nations. A major one is that 45 million Americans lack health insurance, while Canada and many European countries have universal health care, they say. But "it's not as simple as saying we don't have national health insurance," said Sam Harper, an epidemiologist at McGill University in Montreal. "It's not that easy."

Among the other factors:

- Adults in the United States have one of the highest obesity rates in the world. Nearly a third of U.S. adults 20 years and older are obese, while about two-thirds are overweight, according to the National Center for Health Statistics.
- "The U.S. has the resources that allow people to get fat and lazy," said Paul Terry, an assistant professor of epidemiology at Emory University in Atlanta. "We have the luxury of choosing a bad lifestyle as opposed to having one imposed on us by hard times."
- Racial disparities. Black Americans have an average life expectancy of 73.3 years, five years shorter than white Americans. Black American males have a life expectancy of 69.8 years, slightly longer than the averages for Iran and Syria and slightly shorter than in Nicaragua and Morocco.
- A relatively high percentage of babies born in the U.S. die before their first birthday, compared with other industrialized nations.

Forty countries, including Cuba, Taiwan and most of Europe had lower infant mortality rates than the U.S. in 2004. The U.S. rate was 6.8 deaths for every 1,000 live births. It was 13.7 for Black Americans, the same as Saudi Arabia.

"It really reflects the social conditions in which African American women grow up and have children," said Dr. Marie C. McCormick, professor of maternal and child health at the Harvard School of Public Health. "We haven't done anything to eliminate those disparities."

Another reason for the U.S. drop in the ranking is that the Census Bureau now tracks life expectancy for a lot more countries - 222 in 2004 - than it did in the 1980s. However, that does not explain why so many countries entered the rankings with longer life expectancies than the United States.

Murray, from the University of Washington, said improved access to health insurance could increase life expectancy. But, he predicted, the U.S. won't move up in the world rankings as long as the health care debate is limited to insurance. Policymakers also should focus on ways to reduce cancer, heart disease and lung disease, said Murray. He advocates stepped-up efforts to reduce tobacco use, control blood pressure, reduce cholesterol and regulate blood sugar. "Even if we focused only on those four things, we would go along way toward improving health care in the United States," Murray said. "The starting point is the recognition that the U.S. does not have the best health care system. There are still an awful lot of people who think it does."
